Perfection in the details – Visign flush plates from Viega

Colors, light and furnishings create a room's first impression. However, it's the details that give it lasting character, especially details such as the Visign flush plates from Viega.

Their design, exclusive and discreet, opens the door for unlimited creative opportunities. The technology in the background ensures the highest level of operating comfort. Combined, the look and function create a perfect product.

Level: the flush-mounted plate

Good design doesn't always have to be conspicuous to look nice. The flush-mounted variations of Visign flush plates are living proof. With the exception of the round-cornered designs, all flush plates in the Visign for More and Visign for Style ranges can be installed in such a way that they create an absolutely flat surface with the wall, where only the push buttons stand out. Therefore, the flush plates integrate harmoniously into the surrounding tiling.

It's all made possible through an installation frame, which can be adjusted effortlessly into different tile thicknesses. Additionally, the exclusive natural stone functional unit for the Visign for Style 12 allows the tiles to be installed flush against the actuating panel. This means your designs can extend to stone and other non-traditional bathroom surfaces.

Touchless: Visign for More sensitive and Visign for Style sensitive provide touch-free options

Experience the advantage of the perfect flush: hygienic, fingerprint-free and an absolutely flat, low-maintenance surface. Simply waving your hand is enough to trigger either a small or large flush. This creates uncompromising comfort with a considerable amount of water efficiency, especially when used with one of Viega's WaterSense listed carriers.

The Visign for More sensitive flush plates are particularly discreet. Thanks to electronic activation, there is no need for protruding push buttons. Instead, the installation height of the flush plate on the wall is just 7 mm and the addition of glass lends itself to light and bright bathroom designs.

Visign for More 100 sensitive

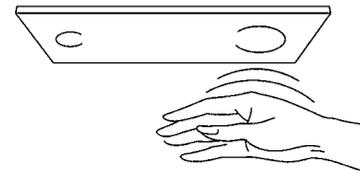

Round trigger areas form a graphical contrast to the straight contour of these flush plates. This simple design is also incorporated in the urinal, which triggers via infrared technology.

Visign for More 105 sensitive

The soft, geometric design of the Visign for More 105 incorporates rounded corners and satin finish details. The use of high-quality white glass rounds out the overall look and feel.

Visign for Style sensitive

The Visign for Style sensitive uses the same appealing design as the Visign for Style, but is completely touchless. With high-quality, attractive finishes, the designer flush plates offer additional orientation in dark rooms through incorporation of luminescent design elements, highlighting the flush plate without turning on the lights.

Luxurious: Visign for More

In your bathroom, there's no room for compromise. That's why Visign for More insists on perfection in all matters, from being designed at the renowned design studio Artefakt in Germany to its use of modern technology and high-quality materials such as metal and glass. Each Visign for More flush plate fulfills the highest demands in aesthetics and operating comfort.
