Description
Three way mixing valves regulate fluid temperature to the system from the heat source. These valves are ideal for mixing fluid to control temperature in heating, cooling, and snow ice melting applications. The valves can be controlled both manually or automatically with the use of actuator (Product No. 20042).

Features
- Compact and lightweight
- Versatile for numerous piping configurations
- Dezincification resistant brass (CW 602N)
- Simple adjustable scale indicating valve position
- Adjustable valve position scale

Specifications
- Fluid Temperature Limits: 14°F - 230°F
- Max. Operating Pressure: 145 psi
- Max. Differential Pressure: 14.5 psi
- Max. Glycol Mixture: 50%

Materials
- Brass valve body (CW 602N)
- PPS composite shaft and
- Bushing EPDM O-Ring

Heat capacity is based on water at a ΔT of 20°F. The fluid used to calculate pressure drop across the valve is water @ 100°F.
