

Project Profile

VIEGA FEATURED IN HEADQUARTERS

Object	Viega North American Headquarters
Location	Broomfield, CO, USA
Year	2018
Installation	Braconier Plumbing and Heating Co.

The beauty of constructing your own building is using your own products, and that's exactly what Viega LLC did with the efforts of Braconier Plumbing and Heating Co. The new Colorado Seminar Center opened in April 2019 and is next door to the company's new permanent headquarters building that opened for business in January 2019.

A host of Viega products was put to work in the seminar center and headquarters building. There's ProPress behind the walls to provide potable water. Radiant heating and cooling keep the buildings comfortable and snowmelt was installed in select outdoor areas. MegaPress connects the fire sprinkler system, and MegaPressG fittings were used on the natural-gas lines. The modern bathrooms feature in-wall carriers and touchless flush plates.

- Instead of traditional ceilings – where things like piping and wiring are normally hidden – the buildings have exposed ceilings. The fire sprinkler system, provided via MegaPress fittings, for example, hangs visible. Hanging among large wooden beams of cross laminated timber (CLT), the carbon steel and MegaPress fittings provide a clean, straight look.
- The radiant manifolds incorporate a variety of Viega products into one solution. Copper lines with ProPress provide the water supply, and water flows from the manifold through carbon steel lines with MegaPress fittings. Once to the radiant locations, water travels through radiant tubing.

- Viega snowmelt products were used in select locations outside the seminar center and headquarters to keep sidewalks and entryways clear, no matter the weather.
- With wall-hung bowls and no exposed tanks, the restroom facilities are modern and sleek, complete with Viega in-wall carriers and “Visign for More 100” style flush plates.
- The Colorado Seminar Center marked the largest radiant job Braconier has ever installed. More than 36,000 linear feet of tubing was laid, combined between the two buildings. In the seminar center, bare concrete floors are comfortable year-round because they are heated and cooled by radiant products.

The Colorado Seminar Center is a much-needed addition to the Viega family. It also features an Interactive Learning Center, which allows attendees to see, touch and experience Viega product while learning about its many capabilities. The video and content-rich environment provides a hands-on experience unlike any other in the industry. It is the second ILC (the original one, newly revamped, is at the New Hampshire Seminar Center), created by award-winning Matrex Exhibits.

The Colorado Seminar Center features several Viega products.

Viega Flushing System Technology is featured in the seminar center and headquarters buildings.

Both buildings are comfortable thanks to radiant heating and cooling products.

MegaPress connects the fire sprinkler system and MegaPressG fittings were used on the natural gas lines.
